Preface Brief History

Contents

Chapter 0 Preliminaries

- 0-1 Sets and algebra of sets: $\mathbb{C}, \mathbb{R}^2, \mathbb{R}^n, \ell_2, c_0, \dots$
- 0-2 some typical sets
- 0-3 functions
- 0-4 field structure and order structure
- 0-5 countable and uncountable sets

Chapter 1 Real Numbers

- 1-1 rational and irrationals numbers
- 1-2 Archimedean fields
- 1-3 bounded and unbounded sets
- 1-4 completeness in the set of real numbers
- 1-5 density of real numbers

- 1-6 axioms of real numbers
- 1-7 absolute value of a real number
- 1-8 exercises

Chapter 2 Metric Spaces

- 2-1 definition and example
- 2-2 pseudo metric spaces
- 2-3 ball and disk
- 2-4 open sets
- 2-5 equivalent metrics set
- 2-6 closed sets and dense set
- 2-7 separable sets
- 2-8 bounded and totally bounded sets
- 2-9 compact sets: Bolzano-Weierstrass Theorem , Hien-Borel theorem
- 2-10 connected sets
- 2-11 exercises

Chapter 3 Sequences in Metric Spaces

- 3-1 convergence of sequences and examples: in \mathbb{R} , \mathbb{R}^n , ..
- 3-2 geometric mean of convergence
- 3-3 bounded sequences
- 3-4 properties of real sequences
- 3-5 relation between limit points and derive set
- 3-6 Cauchy sequences
- 3-7 completeness spaces : prove \mathbb{R}, \mathbb{R}^2 , ...are complete

3-8 isometric mapping, contraction mapping, Banach's contraction Principle.

3-9 exercises

Chapter 4 Numerical Series

4-1 convergence of series

4-2 important examples

4-3 tests of convergence

4-4 absolutely and conditionally convergence

4-5 applications

4-6 Cauchy's product of series

4-5 power series and its applications

4-6 sequences and series of functions

4-7 sequences of bounded functions.

4-8 exercises

Chapter 5 Continuity

5-1 concept of limits

5-2 definition of continuity

5-3 equivalent definitions of continuity

5-4 continuity and compactness

5-5 applications (continuity and compactness)

5-6 uniform continuity

5-7 sequence of continuous functions

5-8 vector space of real valued continuous functions.

5-9 exercises

Chapter 6 Derivative

6-1 when does a function not have a derivative at point?

6-2 Definition and examples

6-3 geometric means

6-4 derivative and continuity

6-5 rules of derivatives

6-6 important theorems and applications

6-7 higher order derivatives

6-8 sequences of differentiable functions

6-9 vector space of differentiable functions.

6-10 exercises

Chapter 7 Riemann's Integration

7-1 Definition

7-2 examples

7-3 sufficient and necessary condition of integrality

7-4 properties of integration

7-5 integration and derivative

7-6 mean value theorem

7-7 sequences of integrable functions

7-8 exercises

Chapter 8 Measurable sets and measurable functions

8-1 Length of Sets

8-2 Outer Measure

- 8-3 Lebesgue Measure
- 8-4 Properties of Measurable Sets
- 8-5 Non-measurable Sets
- 8-6 Definition of measurable functions
- 8-7 Properties and examples
- 8-8 Sequence of measurable Functions
- 8-9 exercise

Chapter 9 Lebesgue`s integral

- 9-1 definition of Lebesgue Integral
- 9-2 Comparison of Riemann Integral and Lebesgue Integral
- 9-3 Properties of the Lebesgue Integral for Bounded
Measurable Functions
- 9-4 Improper Integrals
- 9-5 exercises
